

PROJECT TIME AND EXPENSE

ABSTRACT OF THE DISCLOSURE

A system for capturing time and expense information over a network and for processing the information into a project accounting system has a project accounting system adapted to store time and expense data associated with a project. A user interface provides a form accessible over a network by a user via a browser. The form comprises fields for data entry by the user and a button for electronic submission of the form. A services API is adapted to invoke transactions with the project accounting system based on data contained in the submitted form.
